Profile

Backend Developer with full stack experience designing, developing, and evolving business and enterprise systems: REST and GraphQL APIs, microservices, and asynchronous processing. I work with maintainable, decoupled architectures (DDD, hexagonal architecture, CQRS, event-driven), prioritizing resilience, performance, security, and code quality. Main stack: Node.js, NestJS, TypeScript, PostgreSQL, Redis, Docker, and Kubernetes, with a full stack background (React, Angular) that enables smooth collaboration with product and frontend teams.

Technical Skills

- **Backend and architecture:** Node.js, NestJS, TypeScript, JavaScript, REST APIs, GraphQL, microservices, hexagonal architecture, DDD, CQRS, Event Sourcing, WebSockets.
- **Data and performance:** PostgreSQL, MongoDB, MySQL, Redis, BullMQ, job queues, cache, TypeORM, Sequelize, Mongoose, GORM.
- **DevOps and tools:** Docker, Kubernetes, pods, Linux, Git, Jenkins, AWS EC2, AWS Lambda, AWS S3, NGINX.
- **Quality and security:** unit testing, integration testing, code review, refactoring, optimization, data protection.
- **Complementary frontend:** React, Angular, Ionic, React Native, Astro.

Work Experience

FK Tech - Backend Developer

September 2023 - Present

- Design and development of backend services for internal systems and MVPs, prioritizing scalability, maintainability, and code quality.
- Design of REST APIs and contracts between microservices, integrating frontend and other internal systems.
- Implementation of asynchronous processing with Redis and BullMQ to handle incoming orders from multiple branches simultaneously, tolerating demand spikes.
- Implementation of microservices deployments with Kubernetes and pods, improving organization, scalability, and consistency.
- Design of resilience mechanisms: backups and synchronization of pending orders during failures, reducing operational data loss.
- Application of security practices, data protection, testing, code review, and optimization on critical services.

Technologies: Node.js, NestJS, TypeORM, PostgreSQL, Redis, BullMQ, Docker, Kubernetes, Pods, Microservices.

Fidelatam - Full Stack Developer

October 2021 - August 2023

- Evolution and maintenance of backend and frontend applications, participating in estimation, development, and implementation of features.
- Legacy code refactoring and best practices to improve performance, maintainability, and stability.
- Implementation of Redis to optimize the initial load of heavy data and improve application fluidity.
- Development and integration of services with Node.js, GraphQL, REST, PostgreSQL, and MongoDB, collaborating with product and frontend teams.
- Support for AWS infrastructure and services, providing operational continuity and incremental improvements.

Technologies: AWS, Node.js, Redis, Sequelize, Mongoose, React, GraphQL, REST, PostgreSQL, MongoDB.

Crombie - Full Stack Developer

July 2020 - September 2021

- Backend and frontend development for web and mobile applications using Node.js, React, React Native, Angular, and Ionic.
- Requirements analysis, task estimation, and technical coordination to meet development milestones.
- Participation in code reviews, performance optimization, and scalability improvements in client-oriented solutions.
- Collaboration with multidisciplinary teams to design, develop, and maintain robust applications.

Technologies: Node.js, TypeORM, React, React Native, Angular, Ionic.

Freelance - Full Stack Developer

2018 - Present

- End-to-end development of e-commerce platforms, inventory systems, and mobile applications for real businesses.

- Creation of a mobile application for internal order management at a bar, with real-time communication via WebSockets.
- Development of an e-commerce platform for local businesses during the pandemic, with product publishing, store management, and shipping and payment options.
- End-to-end project management, from needs analysis to implementation, deployment, and maintenance.

Technologies: Node.js, NGINX, PostgreSQL, MongoDB, TypeORM, React, Angular, Ionic, WebSockets.

Education and Languages

- Higher Technician in Software Development, Escuela Superior de Comercio N° 43, Reconquista, Santa Fe, Argentina. 2017 - 2019.
- Brighton English Academy, A1 exam from Brighton, England. 2006 - 2011.
- ICIR Courses: Electronics, Electricity, and PC Repair.
- Languages: Native Spanish, Intermediate English B2.
